Executive Summary — Quenyx vOPS HUB v1.0.0

The release

Quenyx vOPS HUB **v1.0.0** is the first General Availability release, completing the original product roadmap. It unifies monitoring, asset management, automation, incident response, knowledge, service desk, notifications, and compliance into **one enterprise operations platform** with a shared AI layer and a single, evidence-based executive view.

What customers get at v1.0.0

- **One platform, ten modules.** QynSight, QynAsset, QynRun, QynReact, QynKnow, QynSupport, QynNotify, QynShield, QynBalance, and QynVA — all enabled, all consistent.
- **An Enterprise AI Operator (QynVA).** Discovers what the platform can do, builds a single context across every module, and proposes evidence-based, cross-module action plans — never executing on its own, always auditable and editable.
- **Executive Intelligence.** A board-ready dashboard of operational, infrastructure, and compliance health, top risks, top recommendations, KPIs, and an AI executive summary — all grounded in real data.
- **Cost Intelligence (QynBalance).** Infrastructure cost, optimization, and budget forecasting from real platform data, with strict honesty: no invented financial figures.
- **Self-aware platform.** Built-in Platform Health and Enterprise Analytics (MTTD, MTTR, trends, adoption) make the platform observable and measurable.

Why it's trustworthy

- **Evidence-based, no fabrication.** Every number traces to real rows; where data or pricing is missing, the platform says so rather than guessing.
- **Secure by construction.** Multi-tenant workspace isolation, UUID-only addressing, role-based access control, and a complete audit trail on every action.
- **Bilingual.** Full English/Arabic across all new surfaces.
- **No regressions.** v1.0.0 is additive; all prior capabilities are preserved.

Business impact

A single pane of glass for operations leaders: faster detection and response (MTTD/MTTR visibility), proactive optimization (cost and capacity), governed AI assistance across the whole estate, and an executive narrative that is defensible because it is built only on real evidence.

Status

Production-ready (GA). See the Production Readiness Report (doc 44) and Deployment Checklist (doc 43).
